

OPERATION SUPPLEMENT SAFETY

Dietary Supplements and Other Commercial Products Containing SARMs

Selective androgen receptor modulators, or SARMs, are synthetic drugs designed to mimic the effects of testosterone. Although these drugs are still in the research and testing stages of development, and they are classified as drugs, yet most are readily available online both as ingredients in dietary supplement products and as chemicals available for “research only.” Some websites marketing SARMs for “research use” include descriptions with language clearly targeting use for bodybuilding. However, SARMs are drugs and are not legal for use in dietary supplements and are prohibited for use in sport.

In addition, some experimental drugs that are not SARMs are being marketed as or along with SARMs, but they are equally illegal in dietary supplements and prohibited for sport. As a result, the two most common of these are also included below. In addition, there are dietary supplements marketed as SARMs that do not contain any of the drugs listed here. The following list will help you recognize these drugs, which often go by various names, as well as currently available products that contain them.

* Note: In 2013, the original developer discontinued GW501516 due to the discovery of severe toxic effects, and the World Anti-Doping Authority (WADA) issued an alert strongly warning against its use. Nevertheless, it is still widely available online.

OPERATION SUPPLEMENT SAFETY

The list below includes both dietary supplement products and “research” products currently available. The latter do not have the labeling required for dietary supplements. “Current” refers to anything that could be purchased online as of the date on this list, including some products that have apparently been discontinued by their manufacturer or distributor but that can still be obtained from other sources online. The list is a far-from-complete representation of “research” suppliers, as there are too many to include them all; some may legitimately sell only to research facilities.
